## Installation

For the mounting of the parts with a weight above the limit set by the local legislation there are tools available or features on the product foreseen for handling and lifting.

On request we will deliver a handling tool for the bigger double wall insulated pipe. This tool can be clamped around the outer pipe and handled with 2 persons or lifted with a lifting device to position the part above or in front of the previous part (see fig. 1). Please indicate the nominal diameter and system when placing your order.

Weights per meter section are available in the catalogue.
